

## Administration, Maintenance and EMO Air Program Collaborate on Landscaping Project

Starting in April, Tribal programs have been collaborating on landscaping projects around the Paiute Professional buildings. The efforts to date have focused on the planter at the entry to the parking lot on Tu Su Lane and the beds along the South wall of the Toiyabe Indian Health Project Clinic. The project was initiated by Chief Executive Officer, Glenn Hall and Chief Operations Officer, Michael Lumsden who contacted the Maintenance Department and Environmental Program. Toni Richards, the Air Quality Specialist who has training in horticulture provided technical assistance on design, plant selection and the drip irrigation system. Michael Allen, Robert Chavez, Francis LaFrombois, and Jeff Paco, from the Maintenance Department did all of the hard work of site preparation, hauling mulch, and planting.
