

## From the AIR PROGRAM

### Storm Season Rain Event

The winter storm season came to the Reservation and surrounding areas on November 8, with a daily total of 0.76". The Tribe's weather station captures rain via 2 modes— a NWS standard collection gauge with tube, and an electronic tipping bucket gauge. This photo of the tube shows the collection for the event.

### Home Radon Sample Kits

The Air Quality Program has 3 kits for sampling radon levels in indoor air in homes on the Reservation. If you are interested in having your home sampled for radon for free, please call the Air Program

at 760-784-9308. The Air Program will handle the sampling and delivery to the Lab, and will offer interpretation on the results. The Air Program will not make the results public. The test takes about 2-3 days. A selection of homes will be made based on structure, geography, and occupancy. Please be prepared to let the test run in a room with no entry during the test, i.e. no doors opening. *(photo: Alpha Energy Labs 2022)*
